

## **New Aquatec Expert service for AQUAscat**

Aquatec Group is pleased to introduce a new service for the AQUAscat to help new and existing customers make the most of their instruments, and optimise data collection and analysis. Aquatec Expert provides advice and guidance at both the pre and post deployment stages, as well as data analysis and reporting services. For surveyors and consultants, the complete Aquatec Expert service allows the AQUAscat suspended sediment profilers to be used confidently and efficiently, in order to enhance the sediment monitoring and understanding of an area. For researchers, the service can provide a solid baseline understanding of the instrumentation from which future research can flourish. Aquatec Expert is also available for customers renting the AQUAscat instruments.

Three different tiers are available: gold, silver and bronze. Bronze level Aquatec Expert includes a personal consultation to discuss the deployment in detail and pre-deployment advice comprising performance capability predictions and recommended instrument configurations. The silver tier adds a post deployment report, including a critical analysis of the gathered data, hand-tuned inversions and a processed dataset. The gold Aquatec Expert offers silver level service for two deployments within a 12 month period.

Elizabeth Paull, Sales & Marketing Manager, said 'The introduction of Aquatec Expert for the AQUAscat instrumentation range allows those unfamiliar with acoustic sediment profiling to access the wealth of knowledge that can be gained by adding these instruments to projects, including dredge monitoring operations and construction works.'

### **About Aquatec**

The Aquatec Group are creators of innovative instruments, services and solutions for measurement, monitoring and communication underwater. They provide instrumentation solutions for all water environments, including offshore structures and pipelines; oceans, estuaries, rivers and lakes; and marine mammals and fisheries. Aquatec was founded by the current Managing Director in 1990 as a specialist consultancy in oceanographic instrumentation design. Since then, the company has established a diverse portfolio of products for measurement of physical oceanographic and process parameters including temperature, depth, vibration, attitude, suspended sediment, and marine mammal activity, as well as underwater data communication systems and marine mammal deterrents.
